## LESSON PLAN

## Department of Science and Humanities

| Name of the <br> Subject | MATRICES AND CALCULUS | Name of the <br> handling <br> Faculty | Mrs.D.VIMALA |
| ---: | ---: | ---: | :---: |

## Course Objective

To develop the use of Matrix algebra techniques that are needed by engineers for practical applications.
To familiarize the students with diiferential calculus.
To familiarize the student with functions of several variables. This is needed in many branches of engineering.

To make the students understand various techniques of integration.
To accuaint the student with mathematical tools needed in evaluating multiple integrals and their applications.

## Course Outcome

Use the matrix algebra methods for solving practical problems.

Apply differential calculus tools in solving various application problems.

Able to use differential calculus ideas on several variable functions.

Apply different methods of integration in solving practical problems.
Apply multiple integral ideas in solving areas, volumes and other practical problems.
